EVI Global Group Acquires Northern Silica Property

Vancouver, BC – July 25, 2017: EVI Global Group Developments Corp. (CSE: EVI) (the “**Company**”) announces that it has negotiated terms to acquire and develop the “Northern Silica” project, a silica occurrence located East of Prince George, B.C. The company expects to acquire a 100% interest from the “Northern Silica” Syndicate by the issuance of 7.5 million shares. In addition there will be up to a 5% production royalty payable.

The claims cover a total of almost 460 hectares and earlier analytical work of samples have shown that the quartzite is very pure, massive and homogeneous. It is composed of extremely well-rounded and well-sorted quartz grains, averaging 0.5 millimetre in diameter, which are cemented by silica. With the appearance of high SiO₂ the property may be suited for production of ferrosilicon and silicon metal. With the extremely well-rounded and large grain quartz, it may also be suited for Frac Sand. Additional processing and some further work will be required to determine the proper use.

Management continues to seek opportunities in developing this other opportunities to enhance shareholder value. Management will provide an update upon the next material development.
